Education

Georgia Institute of Technology **Expected Graduation: May 2028**
Bachelor of Science: Computer Engineering *Atlanta, Georgia*

Experience

DoorDash **May 2026 – Aug 2026**
Software Engineering Intern *New York, NY*

- Built MCP Server supporting **6k+/month** tool calls using Python on top of 5 downstream gRPC services
- Enabled end-to-end testing of full **Kafka** resource lifecycle: create, deploy, produce, and consume against topics and targets from CLI, publish mock traffic, and verify via metrics
- Extended audit log protobuf schema in **Go** with time window filtering, allowing agent to query Kafka event log efficiently, resulting in a **98%** reduction in search space
- Cut median session duration by **63%** by supplying agent with source of truth on request metadata
- Built LLM judge harness to score agent sessions against rubric and persist session / feedback to Snowflake

Stantec **May 2025 – Aug 2025**
Software Engineering Intern *New York, NY*

- Engineered a Python data pipeline using Pandas to clean, schema-validate, and write Parquet files into MySQL database, processing **9.6M+ rows** and eliminating manual data preparation
- Designed and deployed Flask API, serving **1.2TB+** of processed data via AWS S3 presigned URLs to authorized users, enforced rate limiting, and containerized pipeline and API with Docker
- Developed a shapefile visualizer using GeoPandas, NumPy, and Plotly to render large-scale land data
- Optimized rendering **speed by 48.4% across 250K+** land records by caching recalculated data columns
- Built a traffic data pipeline to automate screenshot capture, normalize timezones, and visualize image differences using NumPy RGBA masking — saving 100+ combined hours for 15 developers

University of Washington **Feb 2025 – Aug 2025**
Undergraduate Research Assistant *Seattle, WA (Remote)*

- Developed multi-threaded Python data collection tool using Selenium and BS4 to extract data from 6000+ public profiles, reducing runtime by 68% and populating PostgreSQL dataset for NLP analysis
- Automated keyword extraction by cleaning dataset with Pandas and applying spaCy pipeline with lemmatization, writing normalized keywords to PostgreSQL, and exposing results via Flask API
- Containerized pipeline stages with Docker/Compose for reproducible builds & zero-config deployment

Pencil x Bloomberg LP **Jul 2023 – Aug 2023**
Software Engineering Intern *New York, NY*

- Architected technical interview prep Discord bot with 1,000+ users, by deploying RESTful APIs using Spring Boot and PostgreSQL for persistent storage of user performance
- Developed event-driven interactions using the Java Discord API (JDA), handling commands and message events to deliver 75+ coding questions and track responses

Awards & Activities

Jane Street SWE Fellow (IN FOCUS) | Selected nationally as 1 of 26 **Jan 2026**
Generation Google Scholar | Selected as 1 of 142 from 14,000+ applicants **Jun 2025**
IBM Student Hackathon | Placed 1st out of 15+ teams **May 2025**

Technical Skills

Programming Languages: Java, Python, Go, C, Kotlin, HTML, CSS, JavaScript, TypeScript
Frameworks/Libraries: Flask, Spring Boot, React.js, Next.js, Tailwind, PyTorch, Pandas, MatPlotLib
Databases & Cloud: AWS, MySQL, PostgreSQL, MongoDB, Google Cloud, Supabase, Firebase
Developer Tools: Git, GitHub, npm, VGG, Vercel, Figma, Postman, Insomnia, Chrome DevTools
